## **Sublime Solution Unveils Acronis360, A Program Designed to Help Acronis Customers Maximize their Acronis Software Purchases**

### ***Acronis360 Rounds Out Sublime Solution's Service Offerings Around Disaster Recovery and Data Protection***

Manchester, NH., December 9, 2011 Sublime Solution, a global IT reseller and services company specializing in Virtualization and Cloud Solutions, Network Infrastructure and Security, and Storage and Information Management solutions, today announces their Acronis360 Program. Acronis360 aims to help companies maximize their Acronis investment and utilize 100% of Acronis' capabilities. Acronis360 includes services around Acronis Backup and Recovery 11, ABR11 for Cloud, Acronis Virtual Editions, and Snap Deploy 4. Acronis360 is targeted but not limited to new Acronis customers, companies with limited resources, companies with technical limitations, Acronis users undergoing a technology refresh or upgrading to new versions, and companies with complex/strategic installations.

Sublime has identified two unique programs under the Acronis360 program to address the challenges of implementing Acronis. Acronis Infrastructure Alignment Services (AIAS) is a strategic program aimed to aid companies with complex environments. For less complex environment's customers can choose an out of the box Acronis Jumpstart Program.

"As a platinum partner of Acronis I am excited about the Acronis360 Program my team has put together. With the complexity of virtualization and the push of Windows 7 Acronis has really gone a long way in providing enterprise class solutions to its customers. Understanding the impact and benefits of a well thought out solution has become our forte. Like any enterprise class solution ensuring you have the correct approach for installation, configuring and management is just as important as the solution itself." said, Jason Schuerhoff, VP of Sales. The program has already been rolled out to a dozen clients and the impacts have been significant.
